# DEMONSTRATION OF PROPOSED FEATURES

SmartBridge Skill Wallet Submission

This document itemizes each functional module proposed for the CaptionAI content generation platform, verifying its implementation status and demonstrating working operational evidence.

| S.NO | PROPOSED FEATURE                  | DEMONSTRATED (YES/NO) | EVIDENCE BASIS         | REMARKS / OPERATIONAL BEHAVIOR                                                                                               |
|------|-----------------------------------|-----------------------|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| 1    | Caption Generator Module          | Yes                   | See Project Video Demo | Processes raw user descriptions to build three distinct platform-optimized caption outputs mapping chosen filters perfectly. |
| 2    | Hashtag Suggester Card            | Yes                   | See Project Video Demo | Extracts key context indicators to deliver exactly ten relevant hashtags using a blend of broad tags and target niche tags.  |
| 3    | Call-to-Action (CTA) Generator    | Yes                   | See Project Video Demo | Generates three short, punchy marketing taglines calibrated directly to trigger user conversions.                            |
| 4    | Platform Engine Filter Toggle     | Yes                   | See Project Video Demo | Applies specialized instructions targeting character count expectations for Instagram and LinkedIn explicitly.               |
| 5    | Tone Adjustment System            | Yes                   | See Project Video Demo | Modifies language frameworks across Professional, Casual, and Promotional parameters securely via Groq prompting rules.      |
| 6    | Responsive Glassmorphic UI Layout | Yes                   | See Project Video Demo | Single-page design complete with automated viewport smooth-scrolling, clipboard copies, and animated button load spinners.   |
