1	Generate Express.js API Gateway boilerplate	Act as a senior Node.js developer. Use Express.js and standard JavaScript.	"Write a clean Express.js server script setup that listens on port 5000, routes incoming requests to <code>/api/generate</code> , and includes a basic rate limiter middleware to prevent spamming."	Generated a functional Express.js template containing the requested route, CORS config, and <code>express-rate-limit</code> setup.	Needed to prompt a second time to explicitly add custom JWT verification header checks inside the routing script.

2	Set up MongoDB Mongoose schema models	Act as a database engineer specializing in NoSQL and MongoDB Mongoose patterns.	"Create a Mongoose schema model named <code>UserLog</code> to save user historical data. Fields needed: <code>userId</code> (string), <code>originalPrompt</code> (string), <code>generatedCaptions</code> (array of strings), <code>selectedPlatform</code> (string), and <code>timestamp</code> ."	Outputted a cleanly structured JavaScript model file using <code>mongoose.Schema</code> with validation parameters built-in.	Iterated to include an auto-expiring TTL index metric for guest user logs after 30 days.
3	Format OpenAI API structured payload call	Act as an AI Integration Engineer specializing in prompt patterns and OpenAI SDK v4 methods.	"Write a JavaScript function that uses the official <code>openai</code> npm package to structure a chat completion request using <code>gpt-4o</code> . The response format must strictly follow a JSON block structure containing text copies, hooks, and hashtags separately."	Provided an asynchronous function integrating the OpenAI completions endpoint with structured system prompt guidelines.	Tweaked the temperature constraint parameter value from 1.0 down to 0.7 to reduce generic corporate buzzword repetitions.

4	Build React layout page container UI	Act as a modern frontend engineer using React.js and utility-first Tailwind CSS classes.	"Create a modern layout for a text generation dashboard in React. Needs a left input textarea box for raw context and a right column area showing three distinct text layout display blocks with a copy button."	Generated a clean, responsive functional component styled completely with grid layouts, margins, and active states.	Manually added custom state variables to show an overlay loading spinner element when the generation call is running.
5	Implement copy-to-clipboard functionality	Act as a core JavaScript UI developer targeting cross-browser utility features.	"Create a utility function in React that copies a text string element directly to the user's OS clipboard using the modern Clipboard API and displays a momentary visual confirmation toast alert message."	Provided a reusable handler script calling <code>navigator.clipboard.writeText</code> alongside conditional state logic.	Added a structural fallback mechanism targeting older mobile browser configurations using the legacy document method.
